

District of Stewart Community Water System

BOIL WATER NOTICE

Contaminated Water

Due to water line repairs. Disease-causing organisms (bacteria, viruses or parasites) may have entered the distribution system. These organisms can cause symptoms such as diarrhea, abdominal cramps, headaches, nausea, vomiting or other symptoms. Boiling the water kills these organisms.

Options for water users are to bring all water to a rapid rolling boil for at least one minute and let it cool before using; use bottled water; or, use an alternative approved source of water. Boiling the water destroys all the potentially disease carrying pathogens, the water is therefore considered potable after it has cooled. Boiled or bottled water should be used for drinking, making ice, brushing teeth and food preparation until further notice. We will inform you when you no longer need to boil your water.

**THIS BOIL WATER NOTICE IS EFFECTIVE UNTIL
FEBRUARY 28, 2021 UNTIL FURTHER NOTICE**

The District has taken water samples, and have sent them to Northern Laboratories to address the situation. The next update is planned to be issued by February 26, 2021.
